

Data Sheet

BRAIN2 Formulation

BIZERBA

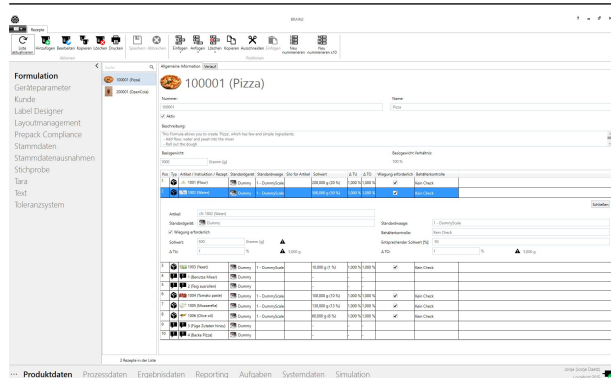

BRAIN2 Formulation is the ideal software for manual formulation, dosing and batching. Thanks to the flexible, configurable operator prompting a high level of process reliability is reached.

More information
High performance
with a wide range of
solutions and options.

Product description

The Bizerba formulation software BRAIN2 Formulation allows to control production processes from a single formulation workstation up to a Client server solution. Master data can be centrally managed via master data maintenance. This includes material information, basic formulas, operating guidelines as well as notes and orders for formulation and manual dosing. Data can also be adopted by higher ranking ERP systems via an interface. All changes to master data are logged and can be called up via the audit trail functions. Batch tracking is ensured by input on the terminal.

Highlights

- Central master data maintenance and formulation management
- MES / ERP connection via adoption of orders or formulations (CSV file)
- Process reliability due to targeted operator prompting
- Change history of master data via audit trail included
- Displaying of mandatory signs, hazard symbols and product images
- Customer provided data connection via programming of web service interface possible
- For each workstation settings can be customized.
- Cyclic backup function possible

Product benefit

- Avoidance of operating errors due to targeted operator prompting and verification of material number per order item
- Process reliability during formulation
- Clearly defined work steps
- Verification of order number and article
- Displaying of mandatory signs and hazard symbols

New and expanded functions

- Manual dosing aid
- Simple, intuitive operation via touch application
